PROFESSIONAL SUMMARY

Senior Backend Developer with 3+ years of experience in backend architecture, API development, and database management. Skilled in Node.js, Nest.js, Express.js, Python, and AI-powered integrations. Experienced in designing scalable, secure, and efficient systems across wellness, education, social platforms, and e-commerce sectors.

TECHNICAL SKILLS

Backend: Node.js, Express.js, Nest.js, JavaScript, TypeScript, Python

Database: PostgreSQL, MySQL, MongoDB, Vector Database

Cloud & DevOps: AWS (SES, S3), twillio

Tools & Integrations: Thawani, AI Integration, myfatorah Integration, Real-Time Communication, Use AI-assisted development tools (e.g., GitHub Copilot, ChatGPT, Cursor, Claude) to accelerate development while critically reviewing, validating, optimizing, and taking full ownership of all generated code.

PROFESSIONAL EXPERIENCE

Quhdock — Lahore, Pakistan

Senior Backend Developer | 2023 – Present

- Developed and maintained large-scale backend applications using Node.js and Nest.js.
- Designed RESTful APIs for real-time and cloud-integrated applications.
- Implemented AI solutions and integrated AI models into services.
- Built reusable backend modules and optimized API performance.

- Collaborated with cross-functional teams including QA, design, and product management.
 - Integrated 3rd-party services such as Thawani Communication Services.
-

PROJECTS

MyScienceLand – Education Platform *(Team Lead Backend Developer)*

Tech Stack: NextJS, NestJS, AWS, MongoDB, GPT-4 AI Integration

- Developed dashboards and student tools using NextJS.
- Implemented performance-optimized UI rendering.
- Integrated AI-powered assessment features for automatic quiz generation.
- Led backend development, API design, and team coordination for timely delivery.

Aviaero *(Backend Developer)*

Tech Stack: Nestjs, PostgreSQL, OpenAI Api (chatbot) JWT, AWS, Git

Aviaero is a student learning platform designed to help students improve their studies through structured study plans, practice questions, and an AI chatbot assistant. The chatbot works as a virtual tutor, helping students understand concepts by answering questions, explaining topics, and generating practice questions based on subject content.

- AI chatbot for study support, explanations, and doubt solving
- Subject-wise structured study plans for guided learning
- Personalized learning experience to improve student performance

LimoGuard — Fleet Management SaaS Backend (Invenza, Qatar)

Tech Stack: NestJs, MongoDB

*Architected and developed a multi-tenant REST API backend using **NestJS + MongoDB** serving limousine companies across Qatar*

- Built a risk auto-escalation engine with atomic MongoDB operations to manage driver payment risk states (on_track → warning → overdue → high_risk → default)
- Engineered-per-company configurable cron jobs for weekly auto-debit, retry logic, and pre-debit reminders using @nestjs/schedule and Redis distributed locks
- Integrated MyFatoorah payment gateway for tokenized card charging, paylinks, and cash payment tracking
- Implemented WhatsApp + SMS notifications via Twilio for payment alerts and document expiry reminders
- Deployed to production with PM2 process management across staging and production environments
